ABOUT ME

An Android developer with over 4 years of experience in the supply chain industry and OTA who managed to work and grow with different team sizes (**4-20**) and **2 verticals** of products simultaneously. Highly eager to develop alongside the rest of the team, **capable of adapting** to new environments and keen to sharpen hard and soft skills. An experienced developer who likes to explore and use the latest technologies to boost **performance** and **effectiveness**.

EXPERIENCE

Sindibad, Tehran — *Android Developer*

Apr 2022 - PRESENT

Sindibad is the first Iraqi company to provide customers with online travel services for booking airline tickets and hotel rooms.

- Collaborated with a team of three to quickly boot up an MPV on a tight schedule for booking hotel rooms despite maintaining the former product (flight ticket).
- **Redesigned** important pages of the flight **product funnel**, like PLP, PDP, COD, Payment, Passengers and … and improved user convention by **20%**.
- Co-operated in the entire application lifecycle with the product and marketing team to create a **99.6%** crash-free app and **+100K** downloads.
- Set up the infrastructure of unit **tests** and increased coverage to **15%**.
- Managed **multi-language** and **bi-directional** layouts challenges. The app supports 2 live languages, Arabic and English.

SKILLS

- **Android** Programming
- **Kotlin** Language
- **MVVM**, MVP architecture
- **Asynchronous** Programming (Kotlin **Coroutines**)
- Android **Jetpack**
- **Git**
- **Design Patterns** and Principles
- **Crash reporting** and **analytics tools** (Crashlytics, Sentry, Amplitude)

VOLUNTEER

- **Coached** 10 intern Android developers and launched a **mentorship** program.
- Collaborated in holding a crash course about empowering the smart houses using Android Applications.
- Participated in QA

- Designed and facilitated knowledge-sharing meetings in the team and covered more than 22 design patterns for the rest.
- Adapted and used new tools and shared with the team. So it speeds up the development time by **35%**.

Miare, Tehran — *Android Developer*

Dec 2020 - Apr 2022

Miare is the only Iranian on-demand delivery solution designed for restaurants, shops and those who want daily packages delivered faster and better.

- Spearheaded redevelopment of main pages of the Miare Courier Application, resulting in **20+** new features and a **15%** reduction of operation time.
- Used Event bus to simplify communication between different app components, especially for propagating web socket events, which resulted in **8% growth** in not missing vital notifications.
- Developed a complete tutorial for the application that elevated conversion by **5%.**
- Wrote unit tests in an MVP architecture, primarily for interactions and presenters.
- Researched and analysed user behaviour to implement a better support system to reduce the load of the CP team by **35%**.

AWARDS

- Khwarizmi Award
- Iran ICS

EDUCATION

University of Kashan, Kashan — *B.S*

Sep 2019 - Apr 2022

Bachelor of computer science

and iOS recruiting interviews.

PROJECTS

Golnoor Airport Apron Lighting Control

Oct 2021 - Feb 2022

Airport Apron Lighting Control is an application to control airports' communication towers.

Board Menu

Dec 2019 - Nov 2020

The Board Menu enabled users to control smart technologies using smartphones.

Things like stadium scoreboards, hypermarket digital boards and even smart greenhouses temperature controller devices.
